The prior art has described the treatment of used acid/peroxide solutions generated in semiconductor manufacturing processes for re-use in processes such as wastewater treatment and aluminum sulfate manufacture (Hagimori et al. (US 5,549,833)). Also known is the use of nitric acid as a decomposition accelerator in combination with sulfuric acid and hydrogen peroxide during wafer manufacture (JP 5-102116). However, the references cited on this record have not disclosed or suggested a process of recycling a used sulfuric acid/peroxide semiconductor process liquid by reaction with nitric acid, then using the reaction product for the modification of a resin.
